

Asset Register — Full Product Tour Spec

0) Tour basics

- **Start points:** a “Help ▶ Take a tour” in header; a pulsing “?” beacon bottom-right on first visit.
 - **Overlay pattern:** dim background, **spotlight** on the target, **coach bubble** with **Back / Next / Skip** and **Step X of Y**.
 - **Persistence:** store `tour_completed` and `last_step` in localStorage; don’t auto-replay after completion.
 - **Accessibility:** focus trapped in bubble; ESC to exit; step changes announced via `aria-live`.
-

1) Anchors to use (add these IDs if they’re missing)

Sidebar

- `tour-valuation` → the Valuation Snapshot card (“As at 05 Nov 2025 / EOD prices • GBP”).
- `tour-entities` → Entities chip group (Personal / Spouse / Ltd).
- `tour-wrappers` → Wrappers chip group (ISA / SIPP / GIA / Personal).
- `tour-custodians` → Custodians/Wallets chip list (Vanguard, AJ Bell, HSBC, Ledger – Main).
- `tour-beneficiary` → Beneficiary (Estate) chip list (Life-beat / Fallback email / Package).
- `tour-quick-actions` → Quick Actions button group (+ Add asset, – Add liability, ⓘ Import CSV, ✨ AI Import, 📎 Upload evidence, ⚙ Density).

Header & KPIs

- `tour-search` → the search input (“Search instruments, accounts, documents…”).
- `tour-currency` → the base currency `<select>` (GBP/EUR/USD).
- `tour-reconciled` → the green “Reconciled” button.
- `tour-export` → “Export CSV” button.
- `tour-print` → “Print” button.
- `tour-kpis` → the 6 KPI tiles row.

Tabs & bodies

- `tour-tabs` → the tab controls (Holdings, Targets & Bands, Transactions, Documents, Reconciliation, Household).
- `tour-holdings-table` → the holdings register table wrapper.
- `tour-holdings-view-listed` → the first “View” button that opens the listed asset drawer (`#detail`).
- `tour-holdings-view-property` → the property row “View” that opens the property drawer (`#detail-property`).
- `tour-docs-grid` → the Documents grid.
- `tour-docs-item` → a document title label that toggles the lightbox (`#doc-view`).
- `tour-reconcile-cards` → the Reconciliation cards grid.
- `tour-missing` → the “What’s missing” panel.
- `tour-household` → the Household bars section.

Inline states inside table/drawers (show & tell)

- `tour-evidence-pill` → any “Evidence” cell showing **On file / Valuation due / On-chain verify**.
- `tour-completeness` → any “Completeness” pill with % and mini bar.
- `tour-wrapper-tag` → any wrapper tag (ISA/SIPP/GIA/Personal).
- `tour-chain-tag` → the “Ethereum” chain tag in the ETH row.
- `tour-eis-countdown` → the EIS countdown badge (“~603 days left”).
- `tour-density` → the “🔍 Density” toggle in Quick Actions.

(You don’t need to surface all the inline anchors as separate steps if they’re explained inside the Holdings/Table step; see below.)

2) Full tour script (26 steps)

Step 1 — Welcome (no target)

- Copy: “Welcome to your **Asset Register**. This tour shows what everything is and how to read it.”
- Action: Next.

Step 2 — Valuation snapshot (`tour-valuation`)

- Copy: “This shows the **as-at date** and that numbers are **end-of-day in GBP**. Reconcile notes sit below.”
- Placement: right.

Step 3 — Entities (`tour-entities`)

- Copy: “Entities indicate **who owns** the assets (Personal / Spouse / Ltd). Use as global scope filters in the full build.”
- Placement: right.

Step 4 — Wrappers (**tour-wrappers**)

- Copy: “Wrappers are **tax buckets: ISA, SIPP, GIA, Personal**. In the full app, toggle to filter and see tax context.”
- Placement: right.

Step 5 — Custodians & Wallets (**tour-custodians**)

- Copy: “The **source of truth** for each holding (brokers, banks, wallets). Reconciliation is done per custodian.”
- Placement: right.

Step 6 — Beneficiary (Estate) (**tour-beneficiary**)

- Copy: “Life-beat & fallback email for a **read-only pack** to your beneficiary if you go inactive (prototype concept).”
- Placement: right.

Step 7 — Quick actions (**tour-quick-actions**)

- Copy: “Add assets/liabilities, **Import CSV, AI Import, Upload evidence. Density** toggles compact spacing.”
- Placement: right.

Step 8 — Search (**tour-search**)

- Copy: “Search instruments, accounts, and documents from anywhere.”
- Placement: bottom.

Step 9 — Currency (**tour-currency**)

- Copy: “Base currency (demo only). In production this would drive conversion.”
- Placement: bottom.

Step 10 — Reconciled (**tour-reconciled**)

- Copy: “A quick **status badge**: green when all custodians are reconciled for the selected period.”
- Placement: bottom-left.

Step 11 — Export & Print (**tour-export** then **tour-print**)

- Copy (export): “Export table data (demo only here).”
- Copy (print): “**Print** produces a clean, light report with a print stylesheet.”
- Placement: bottom.

Step 12 — KPIs (**tour-kpis**)

- Copy: “At-a-glance: **Total, Liquid, Property, Alternatives, Unrealised G/L, and Rebalance status.**”
- Placement: bottom.

Step 13 — Tabs (**tour-tabs**)

- Copy: “Navigate **Holdings, Targets & Bands, Transactions, Documents, Reconciliation, and Household.**”
- Placement: bottom.

Step 14 — Holdings table (**tour-holdings-table**)

- Copy: “One row per asset per wrapper. Sticky header & first column. Scroll to explore.”
- Placement: top.

Step 15 — Table anatomy (inline)

- Copy: “Key columns: **Identifier, Custodian, Wrapper tag, Units/Cost/Price/Value, Evidence, and Completeness.**”

- Placement: top.

Step 16 — Wrapper & chain tags (**tour-wrapper-tag** / **tour-chain-tag**)

- Copy: “Wrapper tags (ISA/SIPP/GIA/Personal) reflect tax treatment; **chain tags** (e.g., Ethereum) mark on-chain assets.”
- Placement: top.

Step 17 — Evidence states (**tour-evidence-pill**)

- Copy: “Evidence shows proof on file: **On file**, **Valuation due**, or **On-chain verify**.”
- Placement: top.

Step 18 — Completeness (**tour-completeness**)

- Copy: “Completeness % = **metadata + evidence + valuation freshness**. Aim for 100%.”
- Placement: top.

Step 19 — EIS/SEIS countdown (**tour-eis-countdown**)

- Copy: “Private equity with **EIS/SEIS** shows a **do-not-dispose** countdown to preserve relief.”
- Placement: top.

Step 20 — Listed “View” drawer (**tour-holdings-view-listed**)

- Copy: “Open a holding to see **Position**, **Compliance/Evidence**, small **Performance**, and **Targets & bands**.”
- Action: Simulate click (or prompt user) → wait for **#detail** drawer visible; bubble pins to drawer header.

Step 21 — Drawer details (inside drawer)

- Copy: “Position shows **Units, Price, Value, Cost, G/L**; Compliance shows **Identifier, valuation date, evidence**.”
- Placement: inside drawer; Next closes drawer (simulate clicking ✕).

Step 22 — Property drawer (**tour-holdings-view-property**)

- Copy: “Properties include **valuation reminders**, compliance items (EPC/insurance/title), and **yield/LTV** notes.”
- Action: Open **#detail-property**, show bubble; Next closes it.

Step 23 — Targets & Bands (switch tab)

- Instruction: Tour activates the “Targets & Bands” tab.
- Copy: “Buckets have **targets and guard-bands**. **Suggested actions** appear when you drift out of band.”
- Placement: top of targets grid.

Step 24 — Transactions (switch tab)

- Instruction: Activate “Transactions”.
- Copy: “Audit trail for **cost basis** and proof (e.g., contract notes).”
- Placement: table header.

Step 25 — Documents (switch tab; **tour-docs-grid** then **tour-docs-item**)

- Copy (grid): “Vault of proofs: statements, certificates, on-chain exports.”
- Copy (lightbox trigger): “Click to preview in a **lightbox** (demo frame).”
- Action: Simulate click → wait for **#doc-view** lightbox visible; bubble explains; Next closes it.

Step 26 — Reconciliation (switch tab; **tour-reconcile-cards** + **tour-missing**)

- Copy (cards): “Per-custodian status: **period, statement on file, differences.**”
- Copy (missing): “A **What’s missing** list makes the register defensible.”
- Placement: top.

Step 27 — Household (switch tab; **tour-household**)

- Copy: “Roll-ups by entity. Set ownership to get correct totals across the household.”
- Placement: top.

Final — Density (**tour-density**)

- Copy: “Use **Density** for compact rows. That’s the tour — you’re set.”
- Done.

3) Behaviour notes (what each thing *does* in this prototype)

- **Sidebar chips** (Entities, Wrappers, Custodians): **informational only** in the current mock; tour explains their *intended* filtering behaviour in the full app.
- **Beneficiary chips**: open a **settings drawer** in future; tour treats them as informational concept today.
- **Quick actions**: open **demo drawers/lightboxes** only.
- **Reconciled button**: informational status; no modal.
- **Export CSV**: no-op; **Print** uses the included print stylesheet.
- **Tabs**: fully functional (CSS radios).
- **View (drawers)**: open via **#detail** and **#detail-property** checkboxes (already in the HTML).

- **Documents lightbox:** opens via `#doc-view` checkbox (already in the HTML).
 - **Density:** toggles compact variables (already wired).
-

4) Copy tone

- UK English; 1–2 short lines per step; no jargon.
 - Use the exact labels users see (“Wrappers”, “Reconciliation”, “Completeness”, etc.).
-

5) Acceptance criteria

- Tour starts, skips, resumes, and restarts reliably; progress saved.
- Every **pill, chip, tag, button, tab, drawer trigger, and lightbox** listed above is covered by a dedicated step or a clearly stated sub-step.
- Steps that require a view to be open (drawers, lightbox) **trigger/open it** before explaining.
- Works with keyboard only; ESC exits; responsive placement avoids covering targets.
